Features

“Process control” and “Traceability” can be established through daily manual soldering operation.

Information to be collected by T36 series tip

The following information can be collected by memory chip in T36 series tip and saved in a computer through a soldering station.

- Tip shape
- Serial number
- Number of loads
- Total time of power supplied
- Load Sensitivity
- Type of solder alloy (Lead-Free / Lead)
- Count alarm

Optimization of soldering conditions is now possible based on a variety of information in daily soldering process collected by FN-1010.

More Features

Automatic calibration/off-set can be completed once measurement result is sent through infrared.

Human error-free “tip temperature calibration” and “off-set” can be established through daily manual soldering process. Results of measurement/calibration/off-set can be recorded automatically.

Eliminate human error in manual recording of measurement result by using FG-100B

Human errors in manual recording process and time for recording can be eliminated by sending measurement result from FG-100B to FN-1010.

For further information of FG-100B, see P. 50.

Visualize energy supplied during soldering

It is now possible to visualize invisible energy supplied from T36 series tip during soldering. And that makes it possible to control factors of soldering, which were impossible before.

Notification of alarm with sound and vibration

Alarm can be notified with vibration in a noisy environment.

Free fall detection function

Built-in motion sensor detects free fall and cuts the power. It can prevent burning floor, a fire and other accident with the heat.

Improved button operation

Quick access to “Preset temperatures” and “Off-set mode” with one push.

It takes few button operation to access to most frequently used functions.

Tip cleaner with solder ball preventive design

Solder ball during tip cleaning can be reduced by 99% with devised cleaner designs such as smaller aperture, and set angle as well as position.

Features

IH (induction heater) for excellent thermal efficiency. Ideal for the most challenging soldering jobs.

FX-100 features IH (induction heater) that continuously powers the soldering iron and maintains the set temperature by automatically detecting even minute drops in temperature, plus HAKKO's proprietary "Power Assist" function.

FX-100 achieves powerful thermal recovery even with fine-shaped tips.

It provides excellent thermal responsiveness that conventional IH and sensor feedback systems cannot offer.

Boost function

To increase tip temperature by 5 to 10°C (depends on tip shape) for better working efficiency.

Features of FX-889

User-Friendly Design

● Space-saving design

The reduced foot print is smaller than 2 of FX-888D and its iron holder. Efficient setup is available even on smaller workbench.

● Power-saving design

Independent switches cut the power for each iron when not in use. Power-saving design minimizes standby electricity.

● Superior operability

Four buttons were symmetrically placed at the both sides on the front panel. The two buttons on each side allow simple and intuitive operation.

A color band can be attached to the handle, and this makes it possible to see at a glance which side it is connected to. (2 pieces of color band are included as the standard accessories.)

● Rich functions of iron holder

- Convenient pockets to stock soldering tips
- Three different ways for tip cleaning with provided cleaning tools
- Simple and easy cleaning of iron holder inside by removing holder base

Effects of N₂ system

Heated N₂ gas discharged from the tip end produces three effects. As a result, solderability increases, which allows you to enjoy the following advantages.

- Compatible with no-clean soldering (low-activity flux)
- Solves the insufficient heat supply problems which may occur during soldering of multilayer boards
- Reduces cracking in multilayer ceramic capacitors by thermal stress
- Reduces soldering time
- Relieves loads applied to heat-sensitive parts
- Reduces tip oxidation

● Improving wettability

Heated N₂ gas preheats P.W.B.s and shuts out oxygen. As a result, it prevents the oxidation of solder and flux and improves wettability.

For further details, please scan here.

● Preventing oxidation

Heated N₂ gas reduces the oxidization of tips (iron plating). As a result, the wettability of tips is improved.

■ Test criteria

- After applying power for 3 hours with the temperature set at 400°C, feed solder and perform cleaning, and then compare the conditions.

● Preheating effect

Heated N₂ gas preheats the workpiece. As a result, even if the temperature setting is low, soldering can be finished in the same time as before.

■ Test criteria

- | | |
|--------------------|---|
| Board | Paper phenol copper board |
| Component | Connector |
| Solder | Lead-free solder (Sn-3Ag-0.5Cu) ϕ 0.5mm |
| Tip shape | T12-D24 and T13-D24 |
| Measurement method | Measure the time until the workpiece reached to 250°C at 5-points |

The three effects result in improved workability, quality stability and reduced running cost.

V-Groove Maker

- Cutting a V-groove put on the solder surface reduces the splash of solder and flux.
- The solder feed amount can be controlled by turning the switch on and off.
- Compact, space-saving automatic solder feeder

Features

Minimize solder and flux splash

Cutting a V-groove on the solder surface enables the release of gas pressure generated by the flux, thereby suppressing splash. HAKKO 375 can cut a groove in only the solder needed, then helps to reduce the level of defectiveness.

Advantages of V-grooved solder

-Examination of solder and flux splash

Test criteria

Measurement method	Measure the amount of solder and flux splashing after solder is fed to the soldering iron
Temperature setting for soldering iron	350°C and 400°C
Solder	Lead-free (Sn-3Ag-0.5Cu) Halogen-free flux ø0.3 mm and ø1 mm
Solder feed length	50 mm

* The effect of solder and flux splashing prevention may differ under different operation conditions.

Features

For the daily maintenance of soldering station
Control of "tip temperature", "leak voltage", and "tip to ground resistance" is required for a grounded soldering station for electronic components.

What is leak voltage and tip-to-ground resistance?

Leak voltage

Leak current is the current that leaks from the tip to a board or device. Leak voltage is a specific measurement of the level of this current. The leakage can adversely affect delicate devices, so it is necessary to check leak voltage on a daily basis.

Tip-to-ground resistance

Most leak current flows from the tip via the ground wire to the outlet ground terminal, and is prevented from affecting the device. Because of this, tip-to-ground resistance is another important issue that must be checked daily.

Human error-free operation

1. AUTO HOLD function

The measurement will end automatically when the displayed tip temperature is stabilized.

Individual differences in temperature measurement can be minimized.

2. Data send function (infrared)

Measurement result can be sent to IoT capable soldering station, such as FN-1010, and be recorded automatically.

Human errors in manual recording can be eliminated.

Option

Adapter module

By connecting FG-101B and IoT capable soldering station, such as FN-1010, with adapter module, data transfer can be easy and smooth.

Hot-Air SMD Rework Station

Common Features of FR-810B and FR-811

Auto sleep and auto shutoff features

To ensure safety and conserve power, when the handpiece is placed in the handpiece holder, the auto sleep function is activated and it starts cooling automatically.

If the handpiece has not been removed from the handpiece holder (example: using it in a rework fixture) and after it has been idle for 30 minutes, auto shutoff function is activated. It is automatically powered off.

Access to settings can be restricted via the password function for easy management.

Handpiece holder No.B5048 in the picture can be attached to FR-811 as well (option).

Preset mode

	Preset 1	Preset 2	Preset 3	Preset 4	Preset 5
Temperature (°C)	250	300	350	400	450
Time (sec.)	100	80	50	120	150
Airflow (level)	6	7	8	4	5

Chain presets function for making a simple thermal profile

The chain presets function is to make a simple thermal profile by combining several preset conditions (up to 5 steps).

* Presets 4 and 5 have been set to "000", so they are skipped.

Features of FR-811

Interface designed for intuitive operation. Possible to link to a PC.

Easy-to-read LCD

Easy-to-operate multi-direction control knob

A USB device terminal for easy data transfer

Link to a PC (A USB I/F terminal available)

The functions needed for SMD rework are in a compact body.

Possible to make full-scale thermal profiles with 6-zone hot air and a bottom heater

A basic thermal profile is composed of the 5 parts shown below. FR-811 can provide 6 zones in which temperature, time, and airflow are controlled. Therefore FR-811 can make a full-scale thermal profile which is close to reflow profiles made by a reflow oven.

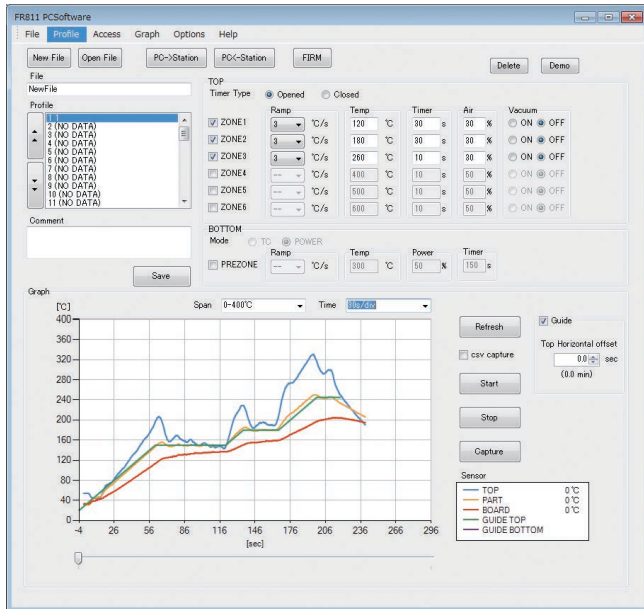

Record thermal data

By connecting a thermocouple included with FR-811, the temperature of the component or circuit board can be measured and recorded. In addition, if "TC LINK" is set, the heater output can be automatically controlled so that the temperature of the thermocouple attached to the component or circuit board follows the set profile.

Operation on a PC for various settings

By connecting FR-811 and a computer with a USB cable and using the dedicated software which comes as standard, a set thermal profile and actual temperature change can be shown in a graph in real time. The set values and graph can be saved in csv format.

Linked operation with the bottom heater

FR-811 can control on/off timing and output of the bottom heater which is available optionally.

Hot-Air SMD Rework Station

Common Features of FR-810B and FR-811
